PROFESSIONAL SUMMARY

Results-driven React Frontend Developer with 2.5+ years of experience building responsive, production-grade web applications using React.js, JavaScript, HTML, CSS, and RESTful APIs. Expert in component-based architecture, React Hooks, Context API, and performance optimization (memoization, code-splitting, lazy loading). Consistent track record delivering scalable UI systems within Agile teams. Proficient in leveraging AI tools (Claude, ChatGPT/Codex) to accelerate debugging, code review, and prototyping.

TECHNICAL SKILLS

Languages	JavaScript, HTML, CSS, SQL (Basic)
Frontend	React.js, React Hooks, Context API, Component Architecture, Bootstrap, Tailwind CSS, Responsive Design, Cross-Browser Compatibility
Backend / API	RESTful APIs, API Integration, Node.js (Basic), MongoDB, PostgreSQL
Tools	Git, GitHub, GitLab, VS Code, JIRA, Postman
AI Tools	Claude (Anthropic), OpenAI ChatGPT / Codex, Google Antigravity
Practices	Agile / Scrum, Sprint Planning, Code Review, Debugging, Performance Optimization

WORK EXPERIENCE

Associate Software Engineer – React JS Developer | Techversant InfoTech Jan 2024 – Present

- Built and maintained responsive, cross-browser React.js applications, translating UI/UX designs into modular reusable components deployed across multiple production modules.
- Integrated RESTful APIs for dynamic frontend-backend communication, enabling real-time data updates and consistent state management across core application features.
- Optimized UI performance using memoization, code-splitting, and lazy loading, reducing re-renders and improving perceived load speed across all major pages.
- Architected a scalable reusable component library adopted team-wide, cutting new-feature development time and eliminating cross-project code duplication.
- Used AI tools (Claude, ChatGPT/Codex) to accelerate debugging and peer code reviews, shortening bug-fix cycles and improving overall code quality.
- Delivered sprint features on time within a cross-functional Agile team of multiple team members through sprint planning, daily standups, and structured code reviews.

PROJECTS

Trackora — Project Management & Employee Tracking System Techversant InfoTech

- Developed a full-featured employee tracking platform for managing tasks, timesheets, and real-time progress with live dashboards and instant status visibility for managers.
- Implemented an API-driven data pipeline between frontend and backend ensuring consistent real-time state across all task and employee records.
- Created reusable dashboard UI components for activity and task-status tracking, reducing manual reporting overhead and improving team productivity.

Evento — Event Management System Techversant InfoTech

- Built a scalable event lifecycle platform covering end-to-end workflows: event registration, payments, hotel booking, and automated invoice generation.
- Integrated Razorpay with QR-based and manual payment verification, supporting three distinct payment methods with robust error handling.
- Delivered a fully responsive, mobile-first UI tested across all major device breakpoints for a consistent cross-platform experience.

Employee Management System	Personal Project
• Built a full-stack employee management application with separate Admin and User roles, enabling role-based access control without backend authentication middleware. • Admin panel supports complete CRUD operations — add, edit, and delete employee records — with real-time form validation and instant UI feedback using React state management. • User dashboard displays a fully responsive, searchable employee directory built with React.js and Tailwind CSS, optimised across all device breakpoints. • Developed a RESTful API backend using Node.js and Express.js with structured endpoints for employee listing and record management. • Designed and managed a relational PostgreSQL database schema for role-based users and employee records, using parameterised queries to prevent SQL injection.	

Todo List Application	Personal Project
• Developed a responsive Todo List application with full CRUD functionality — create, read, update, and delete tasks — using React.js and Tailwind CSS for a clean, intuitive UI. • Implemented local state management with React Hooks (useState, useEffect) to handle task creation, inline editing, completion toggling, and deletion without page reloads. • Designed a minimal and mobile-first interface with real-time task filtering (All, Active, Completed) for improved usability across devices.
